Details

You will submit your assignment to this page.

Please refer to your course syllabus for additional details about this assignment.

When you save your assignment, the file name should be "First Name_Last Name_Assignment Name."

Your case study is to build classifiers using logistic regression to predict ALL 3 CATEGORIES of hospital re-admittance. There is missing data that must be imputed.

Once again, discuss the top 5 variable importance of your best model as part of your submission.

Robert Slater 2/10/2025

Lets make sure we get actual tables for the classification report and confusion matrix (or use ConfusionMatrixDisplay.frompredictions())

Definitly need a wider value search for C, for instance I do 10E-6 to 10R+6 (20 values).

Reminder are results should be Cross Validated Results so your support should be 101k for this case study

Jessica Mcphaul 2/10/2025

Roger that. Thanks for the feedback.
